

Josh Teel
Senior Project Manager

April 29, 2022

Dear Neighbor,

As part of our commitment to provide safe, reliable service to our customers, Central Maine Power Company (CMP) will be replacing transmission line structures in your area this year to meet newer federally required standards for electric system stability.

Beginning in late spring, CMP will begin upgrading 83 structures on three transmission lines between Lewiston and Livermore Falls, and Madison and The Forks. The structure replacements are part of a multiyear maintenance project to mitigate clearance issues that were identified by CMP through a North American Electric Reliability Corporation mandate. This work is the last that needs completion under the federal directive.

CMP's field team will be replacing existing poles and components with new, slightly taller durable poles plus new, upgraded components. Crews will be accessing the transmission line corridors on roads where CMP has access rights or legal agreements with property owners or towns. CMP will be reaching out to adjacent landowners to acquire access rights for this project. Work will be done during daylight hours and you may hear construction noise.

Thank you for your understanding as we undertake this work.

If you have any questions, please contact our Public Outreach Team at 1-888-267-0831, be sure to reference "Structure Replacements" and a representative from our team will be in touch with you.

Sincerely,

Josh Teel

Josh Teel, Senior Project Manager / Central Maine Power
