

## Baldwin Resiliency Project

Standish, Sebago, Baldwin

Winter 2026-Fall 2026

### Project Overview

As part of our commitment to provide safe, reliable service to our customers, Central Maine Power (CMP) is performing work to improve the resiliency of our system and to strengthen service for local families and businesses.

These grid-strengthening improvements will be made to the roadside distribution lines along Route 114, Boundary Road, and Mosley Road in Standish; Route 114 in Sebago; and Route 11 in Baldwin, serving over 3,200 area customers.

Improvements will include upgrading the distribution lines with stronger poles and covered wire as well as adding smart devices. These devices can restore power remotely, in as little as five minutes after outages.

CMP is reaching out to neighbors to ensure that all improvements are performed safely and with minimal disruption to communities.

### Project Need

The purpose of this project is to improve the reliability of the energy grid in this area which is currently prone to outages, improve the resiliency of the electric system, and install smart devices to decrease restoration times in the event an outage does occur.

### Benefits to Customers

- Improving service reliability for over 3,200 area customers.
- Improving the resiliency of the electric system.
- The bottom-line goal of this project is to help avoid outages and shorten the length of outages when they do occur so customers can count on having power when they need it most, as Maine faces more extreme weather and extreme storms.

### FOR MORE INFORMATION

**Project Information Line:** 1.888. 267.0831

**Email:** [outreach@cmpco.com](mailto:outreach@cmpco.com)

Please refer to the Baldwin Resiliency Project in your message.

### Project Scope

This project will involve work to upgrade area lines. and will include:

- Upgrading lines with stronger, more resilient poles and covered wire.
- Installation of smart devices.
- Preventative tree trimming for reliability.

### Project Facts

- **Municipalities:** Standish, Sebago, Baldwin
- **County:** Cumberland
- **Permitting Required:** ME Department of Environmental Protection, ME Department of Transportation

### Estimated Timetable

- **Construction Start:** February 2026
- **Project Duration:** 6-8 months

### Trees and Vegetation

Trees and vegetation will be trimmed or removed from the right of way to make room for the new line as well as reduce the potential for storm-related damage or outages. When needed, CMP will talk with landowners about trees outside the right of way that may pose a future danger to the line, always working with respect toward property, and with safety top of mind.

### What to Expect

Work hours will comply with town ordinances and will be performed within the ME Department of Transportation right of way. Crews may be in your area to do tree work and return at a later date to install poles, wire, and devices. We thank you for your patience as this important work is completed.

Neighbors may experience:

- Some typical construction noise, such as vehicle backup beeping and the sound of heavy equipment operating.
- Increased vehicle traffic and minor traffic disruptions, including the use of flaggers and temporary lane closures. Crews will take great care to observe speed limits and use caution while traveling through your neighborhood.
