Residential and Small Non-Residential Standard Offer Service

Consumer Information About Your Electricity Supply

July 2026

Electricity suppliers in Maine must, by Maine law, provide fact sheets, or "uniform labels" from time to time to educate consumers about their electricity service. Your electricity delivered by Central Maine Power Company, but the ***electricity itself*** is supplied by:

NextEra Energy Marketing, LLC (50%)

New Brunswick Energy Marketing Corp (25%)

Constellation Energy Commodities Group, Maine, LLC (25%)

The fact sheet provides consumer information about the power supply sources and air emissions of service providers.

Power Source

(Jan 1, 2025 – Dec 31, 2025)

This supplier provided electricity with the following resources:

	Supplier's Mix	New England Mix
Biomass	7.4%	3.5%
Municipal	2.5%	2.2%
Fossil Fuel Cogen	0.0%	0.0%
Fuel Cells	0.4%	0.9%
Geothermal	0.0%	0.0%
Hydro	3.6%	5.4%
Solar	5.9%	8.5%
Tidal	0.0%	0.0%
Wind	2.2%	4.4%
Nuclear	5.7%	22.3%
Gas	61.7%	45.2%
Oil	9.9%	7.2%
Coal	0.7%	0.3%
Total	100.0%	100.0%

Air Emissions

(Jan 1, 2025 – Dec 31, 2025)

This table compares the air emissions from the supplier's electricity mix to average emissions levels from all New England sources.

		Supplier's Mix (lbs/MWh)
Carbon Dioxide (CO2)	**798.44**	This is 15.03% higher than the New England Average
Nitrogen Oxide (NOx)	**0.64**	This is 11.5% higher than the New England Average
Sulfur Oxide (SOx)	**0.46**	This is 50.25% higher than the New England Average

Notes: lbs/MWh = pounds per Megawatt-hour
1 Megawatt-hour = 1,000 kilowatt-hours

Additional Information and Required Notes:

Power Sources—Maine law requires retail electricity providers to periodically provide information to their customers on the mix of power sources used by the provider to serve their Maine customers' load.

Emissions—Carbon Dioxide (CO_2) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. Nitrogen Oxides (NOx) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). Sulfur Dioxide (SO_2) is formed when fuels containing sulfur are burned. Major health effects associated with SO_2 include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.

If you have any questions or need further explanation, please call the Maine Public Utilities Commission, toll-free at 1-800-452-4699. Additional information can be found at https://www.maine.gov/mpuc
